Abstract

This document is a template for the scientific and technical (S&T for short) report that is to be delivered by any BiCS student at the end of each Bachelor Semester Project (BSP). The Latex source files are available at: <https://github.com/nicolasguelfi/lu.uni.course.bics.global>

This template is to be used using the Latex document preparation system or using any document preparation system. The whole document should be in between 6000 to 8000 words ² (excluding the annexes) and the proportions must be preserved. The other documents to be delivered (summaries, ...) should have their format adapted from this template.

1. Plagiarism score

0%

2. Introduction ($\pm 5\%$ of total words)

This paper presents the bachelor semester project made by Motivated Student together with Motivated Tutor as his motivated tutor. It presents the scientific and technical dimensions of the work done. All the words written here have been newly created by the authors and if some sequence of words or any graphic information created by others are included then it is explicitly indicated the original reference to the work reused.

This report separates explicitly the scientific work from the technical one. In deed each BSP must cover those two dimensions with a constrained balance (cf. [BiCS(2018b)]). Thus it is up to the Motivated Tutor and Motivated Student to ensure that the deliverables belonging to each dimension are clearly stated. As an example, a project whose title would

1. remove this footnote after having read it - a tutor is not a co-author per se for a student work. It is possible that you will exploit your BSP report to produce a scientific and technical publication. In this case, you'll discuss the authors list with the concerned parties.

2. i.e. approximately 12 to 16 pages double columns

be “A multi-user game for multi-touch devices” could define as scientific [Armstrong and Green(2017)] deliverables the following ones:

- Study of concurrency models and their implementation
- Study of ergonomics in human-computer interaction

The length of the report should be from 6000 to 8000 words excluding images and annexes. The sections presenting the technical and scientific deliverables represent $\pm 80\%$ of total words of the report.

3. Project description ($\pm 10\%$ of total words)

3.1. Domains

3.1.1. Scientific . Provide a description of the scientific domain(s) in which the project is being made.

3.1.2. Technical. Provide a description of the technical domain(s) in which the project is being made.

3.2. Targeted Deliverables

3.2.1. Scientific deliverables. Provide a synthetic and abstract description of the scientific deliverables that were targeted to be produced. Each BSP must contain some work done according to the principles of the scientific method. It basically means that you should define at least one question related to the knowledge domain of your BSP and follow part of the scientific method process to answer to this question. The description of the work done to answer this question is a scientific deliverable.

Examples of question could be:

- Is Python an adequate language for concurrent programs?
- How can we measure the ergonomic of a graphical user interface?
- How can we ensure that a program will not fail?

An answer to such question should be the result of applying partly or totally the scientific method according to its standard definition which can be found in the literature.

As you can see in this template, the scientific deliverable is entirely separated from the technical deliverable. Of course it addresses a question more or less closely related to the technical deliverable.

3.2.2. Technical deliverables. Provide a synthetic and abstract description of the technical deliverables that were targeted to be produced.

4. Pre-requisites ([5%..10%] of total words)

Describe in these sections the main scientific and technical knowledge that is required to be known by you before starting the project. Do not describe in details this knowledge but only abstractly. All the content of this section shall not used, even partly, in the deliverable sections.

4.1. Scientific pre-requisites

4.2. Technical pre-requisites

5. A Scientific Deliverable 1

For each scientific deliverable targeted in section 32 provide a full section with all the subsections described below.

5.1. Requirements ($\pm 15\%$ of section's words)

Describe here all the properties that characterize the deliverables you produced. It should describe, for each main deliverable, what are the expected functional and non functional properties of the deliverables, who are the actors exploiting the deliverables. It is expected that you have at least one scientific deliverable (e.g. "Scientific presentation of the Python programming language", "State of the art on quality models for human computer interaction", ...) and one technical deliverable (e.g. "BSProSoft - A python/django web-site for IT job offers retrieval and analysis", ...).

5.2. Design ($\pm 30\%$ of section's words)

Provide the necessary and most useful explanations on how those deliverables have been produced.

5.3. Production ($\pm 40\%$ of section's words)

Provide descriptions of the deliverables concrete production. It must present part of the deliverable (e.g. source code extracts, scientific work extracts, ...) to illustrate and explain its actual production.

5.4. Assessment ($\pm 15\%$ of section's words)

Provide any objective elements to assess that your deliverables do or do not satisfy the requirements described above.

6. A Technical Deliverable 1

For each technical deliverable targeted in section 32 provide a full section with all the subsections described below. The cumulative volume of all deliverable sections represents 75% of the paper's volume in words. Volumes below are indicated relative the the section.

6.1. Requirements ($\pm 15\%$ of section's words)

cf. section 6 applied to the technical deliverable

6.2. Design ($\pm 30\%$ of section's words)

cf. section 6 applied to the technical deliverable

6.3. Production ($\pm 40\%$ of section's words)

cf. section 6 applied to the technical deliverable

6.4. Assessment ($\pm 15\%$ of section's words)

cf. section 6 applied to the technical deliverable

Acknowledgment

The authors would like to thank the BiCS management and education team for the amazing work done.

7. Conclusion

The conclusion goes here.
